

OZONE CRISIS

What's really going on with the ozone layer? Is the worst over or is it still to come? Have skin cancer rates shot up? Is it safe to allow children to play outside during the day? What do we really know about the effects of UV radiation on plants and animals? Are there more "ozone holes" opening up? Are HCFC's really safer than CFC's? Is the widely-used pesticide Methyl Bromide an even greater ozone threat? If the destruction of the ozone layer is as bad as many scientists say, what are we doing to prepare for it?

There is a strong undisputed scientific consensus that the loss of the ozone layer will fundamentally alter life on this planet. Inside this briefing kit is the information you need to understand what may be the greatest ecological catastrophe we face in the years to come.
